## Balcony blinds use and care instructions

Riikku balcony blinds are an effective way to prevent the sun from heating up your balcony. They also improve the privacy of your balcony.

Balcony blinds can be drawn from both the upper and lower edge. The blinds are attached to a moving balcony glass element and the blinds move with the glass, so they do not prevent opening the glazing normally.

This manual provides more detailed information on the use and care of the blinds to keep them functional and tidy for longer.

## Using the blinds

The balcony blinds come with two grooved profiles, which can be moved to adjust the coverage of the blinds.

- a) **The blinds can be used directly from the groove profiles by raising or lowering them**

- b) **Using a handle installed onto the groove profile**

-The angle of the handle can be adjusted up or down, and it can also be moved laterally to facilitate ease of use

- c) **With a control wand placed in the profile groove.**

-A user friendly option, especially for tall and low glazing.

## Care instructions:

Dust can be removed from the surface of the blinds by dusting carefully with e.g. a duster.

Note! Do not vacuum clean. The fabric can also be wiped with a moist cloth and a mild soap solution.

Tougher stains can be removed using a mild soap solution and water with a max. temperature of 30 °C. The fabric must be rinsed well after washing. After rinsing, immediately hang the blinds to dry with the pleats pulled up (= pleats bunched) until all moisture has evaporated.

The pleats in the blinds fabric will stay sharp if the fabric bolt is bunched up from time to time.
